Modification Report
Formally include the Network Code Modification Rules within the Network Code
Modification Reference Number 0679

Version 1.0

This Modification Report is made pursuant to Rule 8.9 of the Modification Rules and follows the format required under Rule 8.9.3.

1. The Modification Proposal

Well managed governance processes are rightly regarded as key to delivering effective and necessary change that impacts every area, in this context, of the Network Code. The present justification for not including the modification rules within the Network Code is unclear and we note is not consistent with the approach adopted in electricity where the modification rules have been included within the BSC.

Modify the Network Code such that the Modification Rules, as currently published by Transco, are incorporated into and constitute part of the Network Code and hence are subject to the same change governance processes.

It is proposed that the Modification Rules be incorporated as a Supplement to Section V General and immediately prior to or immediately upon incorporation within the Network Code remove Section 1.4 from the Modification Rules.

2. Transco's Opinion

Transco understands from the presentation given by the Proposer at the NT&T Workstream that the main driver for this Proposal is the desire to give Users the ability to formally propose changes to the Modification Rules. Implementation would also provide a common approach to governance across the electricity and gas markets. This Proposal is to simply include the Rules within the Network Code. However unlike the electricity market documents (the Balancing and Settlement Code and the Connection and Use of System Code) there are no pre-existing guidelines for judging the merit of each proposed change to the Rules as the Relevant Objectives for the Network Code relate to transportation arrangements.

Transco notes that Licence Condition 9 clearly defines what the modification procedures should provide for and how they should operate. It also details what steps need to be taken by Transco to change the Rules but gives no indication of how the Authority should judge the merit of proposed changes when giving their consent to them. Transco is of the opinion that consideration should be given to clarifying this within its Licence should this Proposal be implemented.

Transco also notes that currently the Modification Rules are written as a set of procedures rather than the contractual terms found within the Network Code and as such are not legally binding on Users, Members or Transco. Transco considers that they cannot be incorporated in their present form as they would need redrafting to operate effectively as part of the Code.

An alternative approach would be to formally acknowledge that Users can propose changes to the Rules whilst leaving them as separate to the Network Code and to continue to operate the change process outlined in Licence condition 9.6.b. which requires the Authority's "consent" rather than a "direction to modify the Network Code".

3. Extent to which the proposed modification would better facilitate the relevant objectives

The Proposer states that " incorporation of the Modification Rules within the Network Code will enable relevant shippers to propose change to the rules which could be expected to;

1. improve the efficiency of the transportation arrangements and hence the operation of the system,
2. enable Transco to demonstrate fuller compliance with licence condition 4D para 1(a) by removing an apparently anomalous and unfair advantage which it currently enjoys, and,
3. facilitate proposals from a wider subset of the industry thus promoting better competition between shippers and between suppliers."

Transco is not clear how the Proposal would better facilitate the Relevant Objectives or how changes to the Modification Rules would improve the efficiency of transportation arrangements.

4. The implications for Transco of implementing the Modification Proposal , including

a) implications for the operation of the System:

No direct implications are anticipated.

b) development and capital cost and operating cost implications:

No such implications have been identified.

c) extent to which it is appropriate for Transco to recover the costs, and proposal for the most appropriate way for Transco to recover the costs:

Not applicable.

d) analysis of the consequences (if any) this proposal would have on price regulation:

Implementation of this Proposal would not be expected to impact price regulation.

5. The consequence of implementing the Modification Proposal on the level of contractual risk to Transco under the Network Code as modified by the Modification Proposal

It is not anticipated that there will be a change to the level of contractual risk to Transco as a consequence of this Proposal.

6. The development implications and other implications for computer systems of Transco and related computer systems of Users

No development implications on the computer systems of Transco or on the related computer systems of Users are anticipated.

7. The implications of implementing the Modification Proposal for Users

Users would be able to formally propose changes to the Modification Rules.

8. The implications of implementing the Modification Proposal for Terminal Operators,Consumers, Connected System Operators, Suppliers, producers and, any Non-Network Code Party

Transco has not been informed of any anticipated implications.

9. Consequences on the legislative and regulatory obligations and contractual relationships of Transco and each User and Non-Network Code Party of implementing the Modification Proposal

No significant consequences on the legislative and regulatory obligations and contractual relationships of Transco and each User and Non-Network Code Party are anticipated as a result of the implementation of this Proposal.

10. Analysis of any advantages or disadvantages of implementation of the Modification Proposal

Advantages

Users would be able to formally propose changes to the Modification Rules. At present Users are not specifically recognized as being able to propose changes to the Modification Rules within Transco's Licence.

Disadvantages

Proposed changes to the Modification Rules would be subject to the procedures outlined in the Rules themselves.

There are no pre-existing guidelines for judging the merit of each proposed change to the Rules as the Relevant Objectives for the Network Code relate to transportation arrangements.

The Modification Rules are written as a set of procedures rather than the contractual terms found within the Network Code and may not operate effectively as part of the Code if incorporated in their present form.

11. Summary of the Representations (to the extent that the import of those representations are not reflected elsewhere in the Modification Report)

Representations have been received from ten Users: Total Gas and Power Ltd ("TGP) , British Gas Trading ("BGT"), Edf Energy ("EDF"), BP Gas Ltd ("BP"), Scottish and Southern Energy ("SSE"), Scottish Power ("SP"), Statoil UK Ltd ("STAT"), Shell Gas Direct ("SGD"), RWE Innogy ("INN") and Powergen UK ("PGEN") and two Non Network Code parties: the Association of Electricity Producers ("AEP") and Gemserve ("GSV") all of which support implementation of this Modification Proposal.

Licence changes regarding Relevant Objectives

TGP, BGT, SSE, STAT, SGD, INN, PGEN and GSV do not consider any changes are required to Transco's Licence conditions for this proposal to be implemented.

EDF "requests that there is a review of the Applicable Network Code Objectives in the Licence to ensure they are appropriate for the Network Code modification Rules" and suggest "They could be based on the BSC Applicable Objectives". BP note "it may be a timely point to review the robustness of the existing criteria".

Consistency of governance across electricity and gas regimes.

SP, PGEN, AEP support a consistent approach to governance across both the gas and electricity regimes. However the Proposer (TGP) states this is not the intent of the proposal and SGD " do not consider that creating commonality in governance across gas and electricity is necessarily desirable".

Modification Rules needing legal review and redrafting prior to inclusion.

EDF "note that the Network Code Modification Rules text will require legal review before being incorporated effectively into the Network Code", SSE "believe any redrafting should be minor", and BP note "This simply requires work on behalf of all parties to ensure that suitable arrangements/drafting are incorporated in Code". Whereas TGP and STAT believe they are suitable for inclusion.

12. The extent to which the implementation is required to enable Transco to facilitate compliance with safety or other legislation

This Modification Proposal is not required to facilitate any such change.

13. The extent to which the implementation is required having regard to any proposed change in the methodology established under Standard Condition 4(5) or the statement furnished by Transco under Standard Condition 4(1) of the Licence

This Modification Proposal is not required to facilitate any such change.

14. Programme of works required as a consequence of implementing the ModificationProposal

None.

15. Proposed implementation timetable (including timetable for any necessary information systems changes)

An implementation timetable would need to be developed.

16. Recommendation concerning the implementation of the Modification Proposal

Transco support implementation of a mechanism to enable users to propose changes to the Network Code Modification Rules. Recognising the aspiration of shippers, Transco are comfortable that this could be achieved by incorporating the Modification Rules in the Network Code.

However, Transco believe that to do this consideration needs to be give to:

- developing guidelines for judging the merit of proposed changes to the rules
- re-drafting the Modification Rules as to operate effectively as part of the Code
- ensuring that the licence is consistent with inclusion of the Modification Rules within the Network Code.

On this basis, whilst supportive of the intent of the proposal, Transco is not able to recommend implementation in line with the proposal by including the legal text, including the minor amendment proposed, in the Network Code.

Notwithstanding this, the current Modification Rules (with Rule 1.4 removed, as specified by the Proposal) are attached as legal text should the Authority consider implementation of this Proposal as the best way to proceed.

17. Restrictive Trade Practices Act

If implemented this proposal will constitute an amendment to the Network Code. Accordingly the proposal is subject to the Suspense Clause set out in the attached Annex.

18. Transco's Proposal

This Modification Report contains Transco's proposal not to modify the Network Code and Transco now seeks agreement from the Gas & Electricity Markets Authority in accordance with this report.

19. Text

The Proposal is to incorporate the Modification Rules, as currently published by Transco (with the exception of the removal of Rule 1.4), as part of the Network Code.
