Inexus Services, Independent Pipelines Ltd

Independent Pipelines Limited ("IPL") is supportive of the work carried out under the UNC to improve the allocation of costs via the RbD mechanism. IPL has consequently reviewed the below data request and believes that the data is already held by Xoserve via its D01 rejection files. IGTs send Xoserve weekly Logical Meter Number ("LMN") updates which summarise the gas taken by a Shipper at each CSEP. Not only does this cover existing live sites but LMNs are also sent as new sites become "live". Xoserve review these updates and confirm which sites they do not recognise (and consequently sites which will add to the RbD volume) via a D01 file. IPL therefore believes that the AUGE can request the details of such files from Xoserve. Not only will this avoid additional cost for IPL through the report production and management (which would not be recoverable) but also enable the AUGE to obtain the relevant data from a single source.

As such, IPL would kindly refer the AUGE to Xoserve for the provision of such data.
