#### **Reason for support/opposition: Please summarise (in one paragraph) the key reason(s)**

We believe that this Modification will be beneficial to the industry and ensure that sites will be assessed against the correct expectations. It was highlighted by the UIG task force that meter read submission is nowhere near the level expected under code. In addition, that there are too many meters not registered to submit readings at the required level which may well lead to confusion on expectations and difficulties in reporting. Therefore, this will automate a practice that many are not fully complying with and ensure they are then aware of their expectations.

This should then also assist in UIG by getting meter read submission levels up as there is clarity around expectations.

#### **Self-Governance Statement:** *Please provide your views on the self-governance statement.*
