Reference: Calculation spreadsheets

Date: 23rd January 2013

Dear Colleague

In addition to the base data used for the consumption based Unidentified Gas methodology that is available to those code parties who request it, a set of summary spreadsheets were published on UK-Link last week. These contain aggregated extracts of calculated consumptions for each LDZ by EUC Group. The scaling up process is also included in these spreadsheets for those meters whose consumption calculation failed and ultimately you can see the estimate of total Unidentified Gas. Adjustments for LDZ offtake meter errors, DM and Unique site meter errors are also included. There are accompanying notes explaining the contents of the spreadsheets and the methodology is described in the AUGS statement currently published for consultation.

The spreadsheets can be found on UK-Link under "22. MOD229 AUGE Data Provision" and then under the sub-folder "16. 2012 AUGS Total UG Estimate"

Unregistered and Shipperless sites are still undergoing validation so these are not published at this time.

Yours sincerely

Clive Whitehand
