

MOD 0518

Enhancement to the Gas Safety (Installation & Use) Regulations

Proposer - Erika Melén

Panel Date - November 2014

SGN

Your gas. Our network.

Why Change

9 months following meter removal a report is issued to Transporters to investigate sites and ensure the service is left in a safe condition.

As part of investigations desk top checks are carried out. These regularly find evidence of meters still on site caused by data transfer issues amongst other things

If shippers had opportunities to scrutinize the data prior to the report being issued to Transporters these sites could be identified and resolved in a more timely fashion with less impact on customers

Solution

A report is to be issued to Shippers containing sites with meters removed 6 months previously.

Shippers will have 30 days to investigate the sites contained and report back to the Transporters where meters are identified on site.

Where meters are found these will enter into the process implemented by UNC MOD0424 and MOD0425 and be removed from future Transporter GS(I&U)R reports.

Recommended Steps

Proposer recommends that the modification should be:

- Subject to Self Governance
- Sent to Distribution Workgroup for 6 months
