# Project Nexus Workgroup Consumption Adjustments

18<sup>th</sup> February 2015

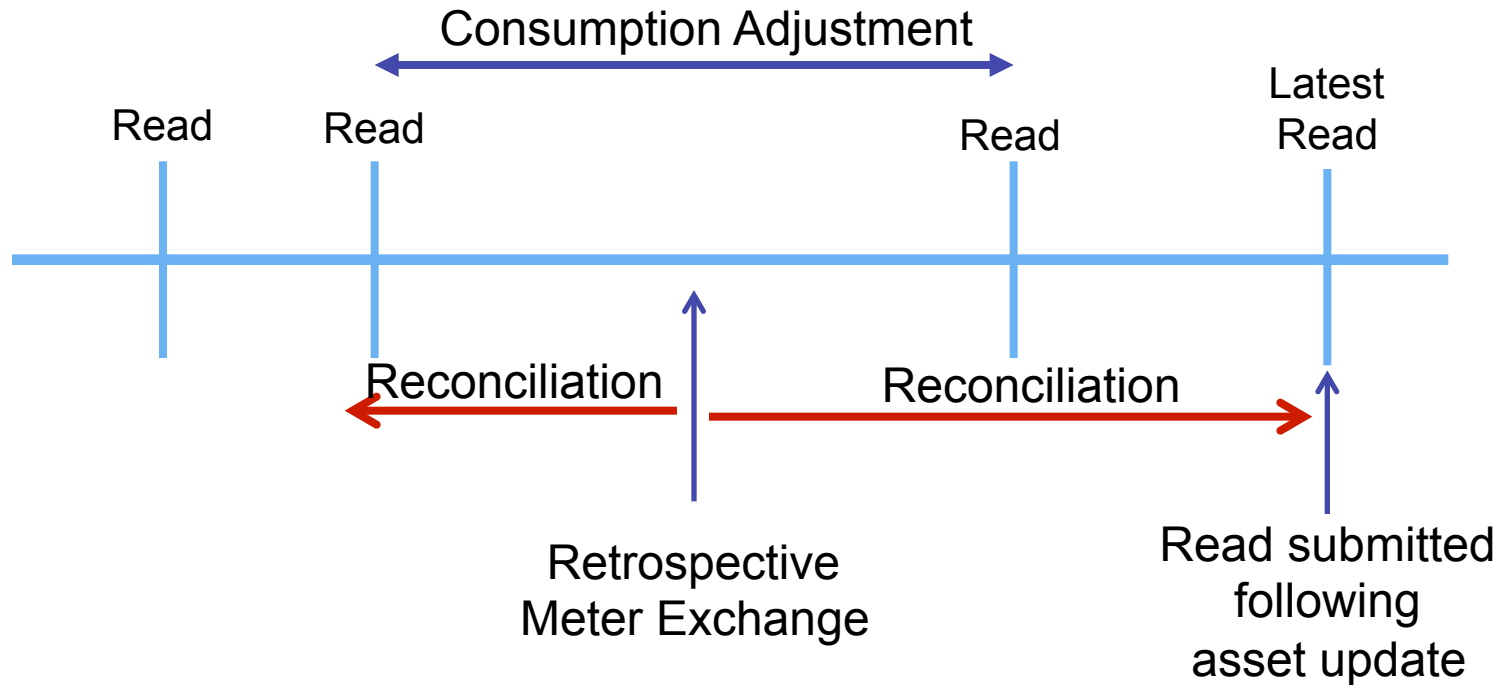

# Background

- Request from PN UNC on 10<sup>th</sup> February 2015 to provide examples of;
- a retrospective update during the period of a consumption adjustment
- AQ process where a consumption adjustment is included within the AQ period

## Following Agreed at 10<sup>th</sup> February 2015 Meeting

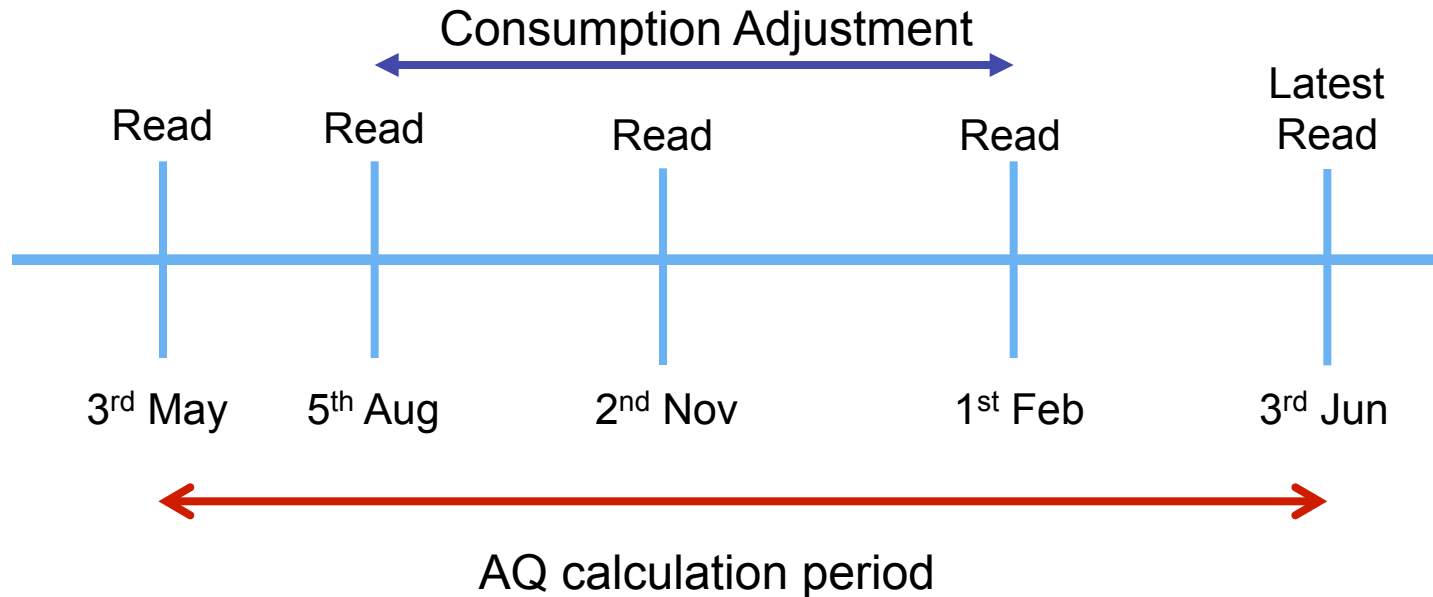

- Once a Consumption Adjustment is processed, reads within the period of the adjustment can not be replaced.
- Retrospective asset updates will be accepted, subject to validation, during the period of a consumption adjustment.
  - The financial adjustment will take into account the latest consumption, as a result of the consumption adjustment.

# Retrospective Adjustment during the Period of a Consumption Adjustment

- Consumption Adjustment aligned to 2 meter reads
- Following a retro asset update after the consumption adjustment, reconciliation will be processed from the update to previous read and from the update to the latest read
- The reconciliation will take account of the energy from the consumption adjustment, not the original energy

# AQ Process following a Consumption Adjustment

- AQ process will calculate AQ using the consumption between the 2 reads within the AQ period
- Where a consumption adjustment is processed during the AQ period the latest consumption will be used to calculate the AQ
