

Representation - Draft Modification Report 0527
Implementation of Annual Quantity arrangements (Project Nexus transitional modification)

Responses invited by: 12 May 2015

Representative:	John Costa
Organisation:	EDF Energy
Date of Representation:	12 May 2015
Support or oppose implementation?	Support
Relevant Objective:	f) Positive

Reason for support/opposition: Please summarise (in one paragraph) the key reason(s)

It is important to appropriately define the AQ “backstop” date and meter reading to be used prior to Project Nexus go-live. We support this modification to ensure that only appropriate source data (being those ‘backstop’ Meter Readings identified as eligible within Section 3 of the Draft Modification Report), are used for the purposes of AQ derivation under the new ‘rolling’ AQ arrangements.

Implementation: *What lead-time do you wish to see prior to implementation and why?*

We agree that the modification could be implemented immediately after an Ofgem decision to implement or by the 2nd July at the latest to add certainty to the transition process. However, we would ask that any re-planned dates/activities for Project Nexus activities more generally are considered in relation to this and any associated Nexus modifications.

Impacts and Costs: *What analysis, development and ongoing costs would you face?*

No significant costs identified outside the overall project Nexus cost / delivery.

Legal Text: *Are you satisfied that the legal text will deliver the intent of the Solution?*

Yes

Are there any errors or omissions in this Modification Report that you think should be taken into account? *Include details of any impacts/costs to your organisation that are directly related to this.*

No

Please provide below any additional analysis or information to support your representation

N/A
