

**Representation - Draft Modification Report 0527**  
**Implementation of Annual Quantity arrangements (Project Nexus transitional modification)**

**Responses invited by: 12 May 2015**

<b>Representative:</b>	Mark Jones
<b>Organisation:</b>	SSE Supply
<b>Date of Representation:</b>	12 May 2015
<b>Support or oppose implementation?</b>	Support
<b>Relevant Objective:</b>	f) Positive

**Reason for support/opposition: Please summarise (in one paragraph) the key reason(s)**

This transitional modification is required in order to put firm rules around the backstop date for rolling AQ under the transitional arrangements for Project Nexus. The rules proposed are in line with the current backstop date rules and will provide a high degree of protection, in that they will prevent significant amounts of erroneous readings from being used in the rolling AQ process post go live. At the same time significant numbers of meter readings taken pre Nexus will not be prevented from being used and so will help rolling AQ to operate effectively from the first month it is implemented.

**Implementation:** *What lead-time do you wish to see prior to implementation and why?*

This modification must be implemented in line with the main Project Nexus go live date.

**Impacts and Costs:** *What analysis, development and ongoing costs would you face?*

No significant costs identified.

**Legal Text:** *Are you satisfied that the legal text will deliver the intent of the Solution?*

Yes.

**Are there any errors or omissions in this Modification Report that you think should be taken into account?** *Include details of any impacts/costs to your organisation that are directly related to this.*

No.

**Please provide below any additional analysis or information to support your representation**
