

0567:

Mod Title: Amendment to Reference Conditions within National Grid NTS – IUK Interconnection Agreement

Proposer: National Grid NTS

Panel Date: 19th November 2015

Why change?

- The EU Interoperability Code requires harmonisation of units and in particular reference temperatures for volume to be 0°C and for gross calorific value to be 25 °C for any data exchange or publication related to Regulation (EC) No 715/2009
- Modification 0519 (as amended by Modification 0562FT) requires that the following are determined at these reference conditions at IPs from 1st May 2016:
 - Capacity
 - Nominations
 - Allocations
 - Energy measurement
- National Grid NTS and IUK wish to amend the reference conditions accordingly within their Interconnection Agreement, effective from 1st May 2016

Solution

- UNC EID provides for an ‘enabling’ Modification to permit these contractual changes
- Modification 0567 is proposed to facilitate these changes in the National Grid NTS – IUK Interconnection Agreement

Recommended Steps

- National Grid NTS recommends that this UNC Modification should: **be referred to a Workgroup when the proposed contractual changes will be presented; and subject to self governance**
