

Code Governance Review

3 self-governance and SCR

Richard Pomroy drawing on previous work by Joint Office

Purpose of modification proposal

- This modification implements Ofgem's final decision on Code Governance Review 3
 - Self-Governance
 - SCR

Self Governance – final proposals

- Currently default position is that modifications are material unless the Panel provides a self-governance statement
- The final proposals reverse this. Modifications should be assessed as to whether they require an Authority decision – that is **why they are material**.
- Ofgem considered that the current criteria are appropriate in respect of assessing whether a modification should be self-governance. **No GT licence changes have been made as a result.**
- UNC guidance on materiality will help a proposer come to a decision on the modification path the change should follow – expected to develop further as a result of work by CACoP

Self Governance implementation

* Refer to Self Governance Guidance for help: www.gasgovernance.co.uk/mods

- Self Governance statement is a defined term in the Licence (referring only to qualification for SG) “means a proposals that, if implemented, is unlikely to have a material effect on...”
- Panel Opinion (materiality statement) will be provided where Authority Direction is required

SCR final proposals

- **1. Ofgem directs licensee(s) to raise modification proposal(s).** At the end of the SCR process we would issue a direction to the relevant licensee(s). Our direction may set out high level principles (with the detail to be developed by industry) or more specific, detailed conclusions to be given effect through code change(s). The modification(s) would follow the standard industry code modification processes. [ASIS]
- **2. Ofgem raises modification proposal(s).** At the end of the SCR process we would raise a modification(s) under the relevant code(s), and the modification(s) would follow the standard industry code modification processes.
- **3. Ofgem leads an end-to-end process to develop code modification(s).** The standard industry process would not apply; Ofgem would lead consultation and engagement needed to develop the appropriate code change(s). We would expect close involvement of the industry; for example, we may establish and lead workgroups similar to the approach under the standard code modification processes (but led by us).

SCR implementation

- We considered but discarded option of incorporating a new term for Authority SCR Modification Proposal as a simpler approach worked
- The definition of SCR Modification Proposal has been changed as has MR6.1.2 which is amended to allow the Authority to raise SCR Modifications Proposals, as well as Modification Proposals (EU law, etc.). It allows existing UNC procedures to be utilised with minimal supporting changes
- New section 9.2 to deal with Option 3 SCR modification proposals raised by authority

SCR implementation

- Other changes to MR to note are:
 - 6.2 q provision of legal text by Authority for Authority SCR Modification Proposal raised by Authority
 - 6.4.5 c prohibition on alternatives by Authority unless SCR or driven by EU or ACER
 - 9.3.19 Authority SCR Modification Proposal does not fetter Panel
 - 9.4.1 f requirement to consider greenhouse gas emissions in Modification Report for SCR Modification Proposal raised by Authority
 - 12.5.2 Authority able to direct timescales for any SCR Modification Proposal
