File Numbering

TPG (24th January 2017) / UKLC (February)

Background

- Xoserve proposed a transition approach with respect to file numbering in Change Packs 1667.2 and amended this in 1669.1
- The approach proposed was:
 - User to Transporter flows – Xoserve do not migrate the previous file sequence number provided by Users. If a User wishes to restart numbering they would be able to do so unilaterally or alternatively they could continue with file sequence numbering from the Legacy system.
 - Transporter to User flows – Xoserve to record the last sequence number issued in the 'legacy' UK Link system for each User by file type, and increment to the next sequence number for the files issued following Project Nexus Implementation Date.

Amendments proposed

- UNC Modification 0565 will amend some of the terminology of the UK Link Manual:
- CDSP is specifically recognised as a UK Link User – rather than acting as the Transporter.
- User to ~~Transporter~~ CDSP flows – Xoserve do not migrate the previous file sequence number provided by Users. If a User wishes to restart numbering they would be able to do so unilaterally or alternatively they could continue with file sequence numbering from the Legacy system.
- CDSP ~~Transporter~~ to User flows – Xoserve to record the last sequence number issued in the ‘legacy’ UK Link system for each User by file type, and increment to the next sequence number for the files issued following Project Nexus Implementation Date.

Amendments proposed

- Representations resulting in amendment:
 - SIF / SIR file (CDSP to Transporter) will run in parallel from Legacy and SAP
 - SIF/SIR files will continue with contiguous numbering from Legacy system
 - File numbering for SIR files from SAP will be [last file number at PNID from Legacy + 100].
 - **File numbering for SIF files from SAP will start from 1.**
- Further revision identified from LLTD Plan Review:
 - MBR (CDSP to Shipper User) final MBR will be issued from Legacy on 4th June (via email).
 - File numbering for MBR files from SAP will be [last file number at PNID from Legacy + 10].

Comments / Clarifications

- Any further questions?
- TPG – Will TPG accept this change and support implementation?
- UKLC – Approval of the Change Summary at February 2017
