Introduction to the Network Code

NETWORK CODE

Introduction

A 'Network Code' is a legal document which forms the basis of the arrangements between a Gas Transporter (GT) and the Shippers whose gas it transports. The Code, which is the subject of this document, is that involving Transco as the GT.

Transco is required by the terms of its GT Licence to prepare the Network Code and to provide copies in accordance with the Licence. The original Network Code is held by the Process Manager whose address is given in the "Guide to the Binder". This introduction does not form part of the Network Code and has no contractual effect as between Transco and the Shippers.

The Network Code Documents

Strictly speaking, the Network Code consists only of the Principal Document and the Transition Document. However, a number of other documents support the Code and their purposes are described below.

Network Code Framework Agreement

By signing this document, Transco and each Shipper wishing to use its network, enter into an agreement 'for purposes of giving effect to and binding themselves by the Network Code'. The document itself is only a few pages long. It defines certain key terms, records the names and addresses of the parties and commits them to work with each other and with all the other parties to the Code. In accordance with the Confidentiality provisions of the Code those names and addresses have been omitted from this copy of the document.

Network Code Principal Document

This is the document which parties to the Framework Agreement sign up to. It contains over twenty sections covering several hundred pages, which define in precise legal detail Transco's Network Code. Some sections cover the topics which are common to any contracts, e.g. the confidentiality obligations, mechanisms for resolving disputes and provisions to limit both parties' legal liability. Other sections cover the topics which are specific to gas transportation and storage.

Network Code Transition Document

This document defines those aspects of the Network Code where interim arrangements were agreed to provide for the introduction of the Code. Initially the Transition Document takes precedence over the equivalent sections of the Principal Document but, as the various key dates pass, its role diminishes steadily until eventually the Principal

Document becomes the sole definition of the Transco Network Code.

Modification Rules

A Network Code can change over time as experience is gained and business conditions vary. A GT Licence granted by Ofgas requires the transporter to define and operate a mechanism to control this process - the Modification Rules. This enables Shippers and the GT to make proposals for change, for Shippers and other interested parties to make representations to proposed changes and for the GT to consider those changes before approaching the Director General of Gas Supply requesting to enact those changes.

Guide to the Network Code Binder

NETWORK CODE

Guide to the Binder

The Network Code is the network code prepared by Transco in accordance with its licence. This Network Code lays out the conditions of use of the pipe network and the method of charging for that use. Charging details are given in the Transportation Statement. The Network Code consists of:

The Network Code Principal Document, and
The Transition Document

both of which are contained in this binder. It has been thought appropriate to include, for convenience,

Introduction
The Framework Agreement,
The Modification Rules, and
A cross-reference to the Defined Terms

which are not part of, but support the Network Code.

This guide is not itself part of the Network Code. For further information please contact:
