Dear Dennis,

Re Mod 269

Further to your fax of this afternoon, I can confirm that the the mod is accepted as urgent.

The timetable is acceptable. Please bear in mind, however, that the dates for your final report and Ofgas' direction are actual not target dates.

Regards

Manager, Transportation

**Urgent Draft Modification Proposal 269**  
**Changes to the charging of Compression at TOM**

**25 September 1998**

**Present Position**

When a shipper is allocated gas at Total Oil Marine (TOM) terminal at St Fergus, they are subject to a charge for compression of the gas under Transco's Transportation Charging Statement. The Claims Validation Service, the agent who provides entry allocations to Transco, will introduce terminal level trading on October 1 1998. This will allow shippers to buy gas at a terminal level, ie. through a 'pool', without having to specify the sub-terminal it was delivered to. The network code, however, requires gas to be allocated at sub-terminal level. This means that all shippers allocated gas at the TOM sub-terminal through the CVSL's allocation process after trading in the St Fergus pool will face compression charges.

**Proposal**

BP proposes that only those shippers who receive gas directly from producers at TOM sub-terminal, known as Base Quantities in the Claims Validation Agreements, should face the compression charges. Transco would receive 'base quantity data' from the Claims Validation Agent (CVA) and use it to raise invoices for TOM compression costs.

Ofgas accepted this as urgent. The close out for representations is noon 25 September 1998.

**Possible Impact on Customers**

This proposal will have no direct impact on customers.
