

Mod 0567s

**Amendment to Reference Conditions within National Grid
NTS – IUK Interconnection Agreement**

Dec 3rd 2015

Modification 0567s

- IUK and National Grid NTS wish to make some changes to the Measurement Provisions within their Interconnection Agreement (IA) to align with EU reference temperature conditions from 1st May 2016.
- These proposed changes are limited to the reference conditions used for physical measurement by IUK and communicated to National Grid NTS.
- National Grid believes this Mod should be considered 'enabling' and be consistent with UNC European Interconnection Document (EID) section A 4.1.3 that permits changes to the IA via a Code Modification.
- The Modification will enable National Grid NTS to comply with Modification 0519 which requires IP measurements to be determined at 0/25 conditions.
- November Panel voted to send Mod 567 to Transmission Workgroup.
- An opportunity for industry to understand the changes, and review proposed IA text.
