EDF Energy	Alex Cebo	29/05/2015	Not In Support	Yes	<p>1. Although EDF Energy supports this change in principle, on this occasion we need to reject it due to insufficient information provided in the pack.</p> <p>We would really appreciated if you could answer the following questions:</p> <ul style="list-style-type: none"> - Will the Portal be accessed through a new web link? If so – can you send us the link so that we can test our browser/security compatibility? - Will all existing DES logins be replaced with new ones? - Will multiple shipper licences be merged into one? If so – Will the User pays charges decrease as result of it? - When/how will new logins be issued? 	<p>Yes, the services will be accessed via the UK Link Services Portal. This link is not available at present; however you will receive a link to the test environment portal as part of Market Trials.</p> <p>Yes, all Users will need to be established as a new Users; on the new application. DES will require a first name, last name and email address to access the UK Link Services Portal</p> <p>The UK Link Services Portal access will work on a Parent/Child relationship similar to how CMS currently.</p> <p>Each organisation will be asked to provide who within their organisation requires access to the UK Link Service Portal and provide the requested User details for set up (first name, last name</p>

				<p>Do we need to set user access levels (i.e. introduce restrictions for users, and super users?)</p> <p>When will we have access to all screens (including User Access screens as currently they are not included in the pack)?</p> <p>- If Nexus go live is delayed, will this change be delayed as well?</p> <p>Provided this information is received and in our internal review we are supportive of</p>	<p>and email address).</p> <p>The process for issuing external User IDs is currently being finalised, once approved this will be communicated to the Industry, through the appropriate channels.</p> <p>User access will be based upon LSO or standard Users. You will be able to confirm what level of access you want the account to have during set up of the logins. We anticipate there will be a bulk upload of Users to the system ready for Go Live. If the LSO functionality has been provided then they will be able to select roles for the Users of the UK Link system that can be specific to the tasks they need to undertake.</p> <p>Walkthrough of the User Access capability will be scheduled for week commencing 15h July to enable these screens to be approved at the August 2015 UK Link Committee meeting.</p> <p>Yes the UK Link Services Portal for both UK Link and Data Enquiry Services will Go Live on the revised Project Nexus 'Go Live' date as agreed by the industry.</p>
