XRN4806 - Additional data at National Level to support UIG Allocation validation

UIG work group to recommend preferred solution options

Hosting the Information

- Secure area of Xoserve.com/UK Link Docs (should it be secure area?) *

- MIPI (National Grid data item explorer)

- On-Line business intelligence portal (new external portal – logon required with download capability)*

- Email data out separately (could be delivered in addition to above)

- Adding to existing reporting suite i.e. shipper performance pack

  *DSG favoured option

Considerations

- Scope currently limited to LDZ's in Scotland - LC/LS/LO/LW/LT
  - Preferred solution from DSG to increase scope to all LDZ's

Updating the information

- Requirement to see daily values, this can be satisfied by:
    - Updating the information on a daily basis post close out (GFD+5)
    - Running once a month providing a daily position (post GFD+5)*

    *DSG favoured option
