

Gas Demand Forecasting Methodology Review and Associated UNC Changes

Matt Newman – September TWG

07 September 2023

Background

- Working closely with National Grid ESO (ESO) and an independent consultancy company to review the Gas Demand Forecasting Methodology (GDFM) to identify improvement areas
- Identified two deliverables:
 1. Ensuring compliance of GDFM to UNC
 2. Potential improvements to the methodology
- Methodology requires a 28 day consultation and Ofgem approval. Aiming for a draft GDFM by November 2023
- UNC Code Modifications to ensure alignment between GDFM, Licence and UNC.

Thank you
