# Project Nexus Workgroup

## AQ calculation

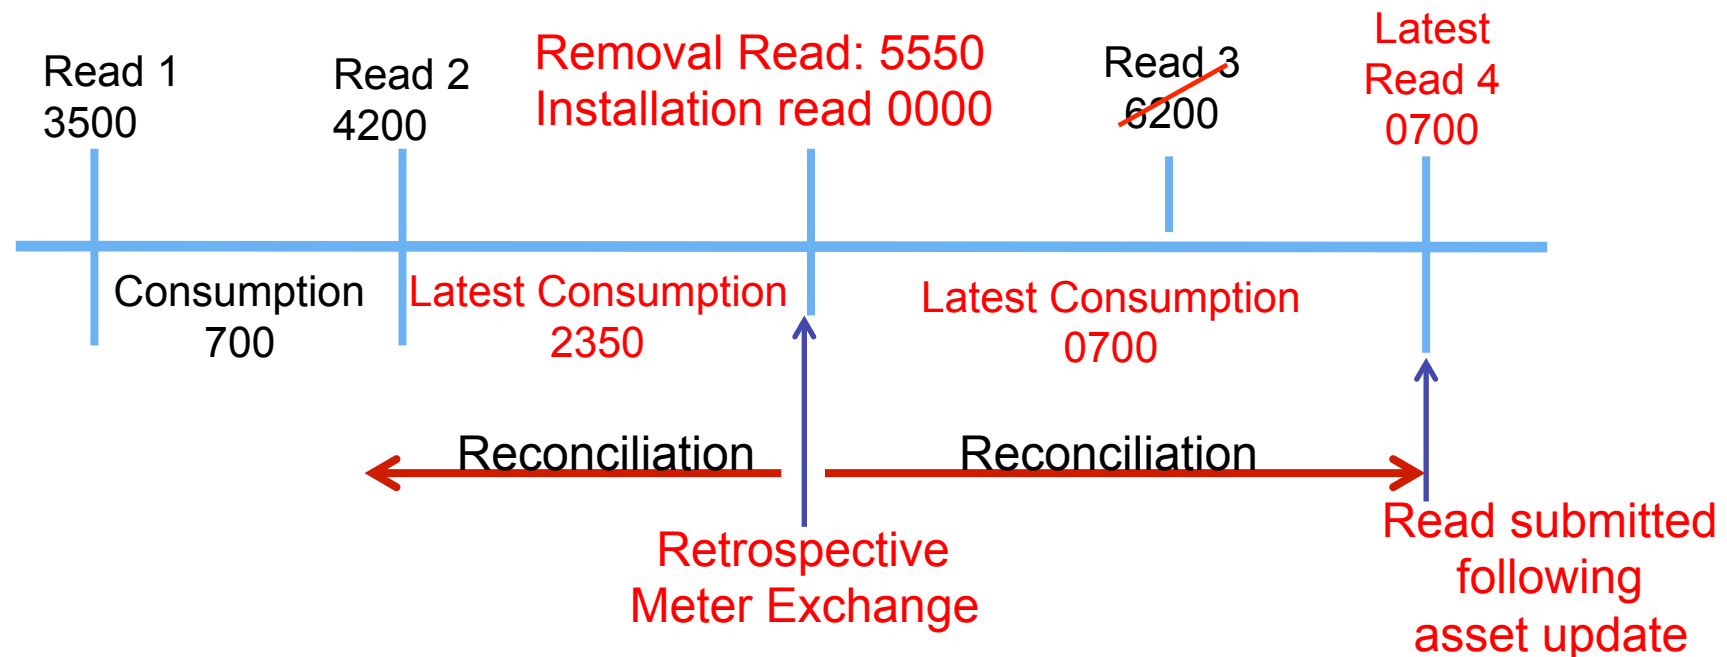

10<sup>th</sup> March 2015

# Background

---

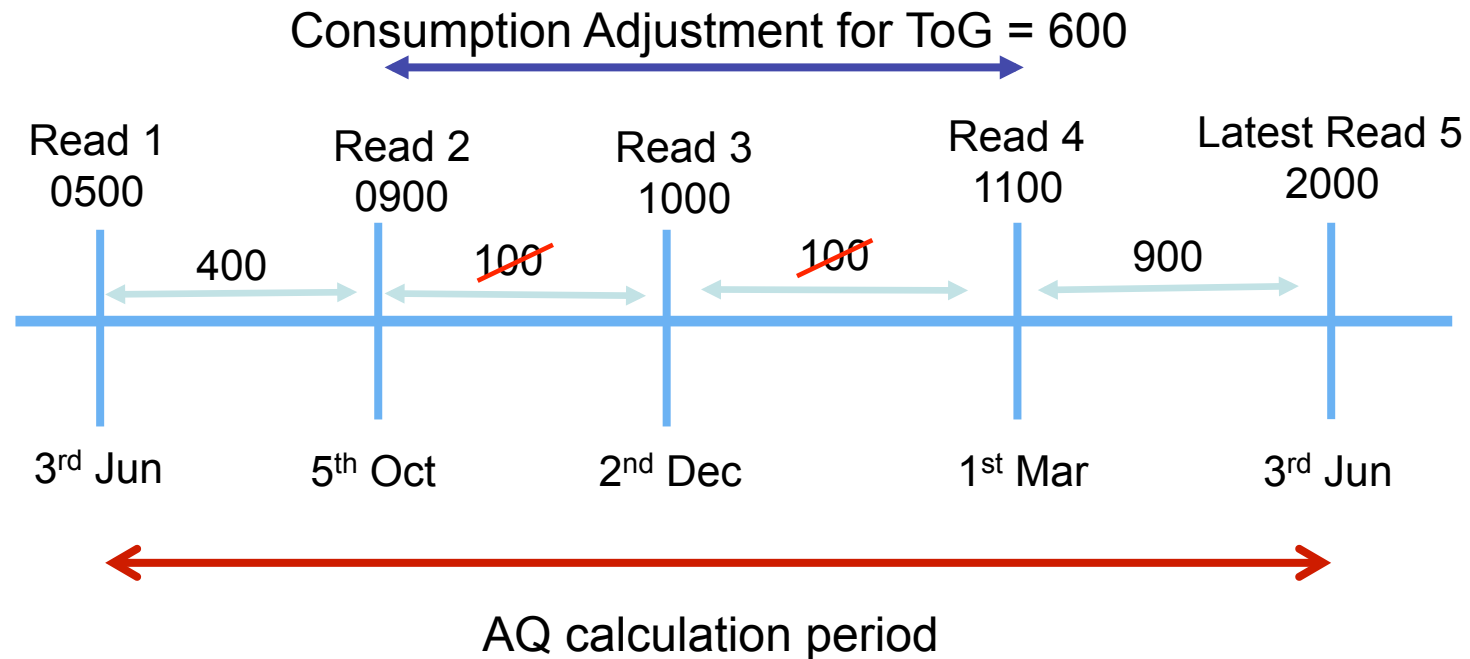

- Requested at the 18<sup>th</sup> February meeting for an example of the consumption used to calculate an AQ
- Following 2 slides provide the following examples
  - Consumption used in AQ process following a retrospective update
  - Consumption used in AQ process following a consumption adjustment for a theft of gas

# AQ Calculation following a Retrospective Adjustment

- Original consumption pre retrospective adjustment = 2700
- Latest consumption following retrospective asset update = 3750
- Upto the retro update the consumption of 2700 would have been used for AQ process
- Following retrospective update the consumption of 3750 will be used for subsequent AQ process, where applicable

# AQ Calculation following a Consumption Adjustment

- Original consumption of 200 between 5<sup>th</sup> October and 1<sup>st</sup> March would have been used for AQ process
- Following consumption adjustment, 600 will be the latest consumption between 5<sup>th</sup> October and 1<sup>st</sup> March used for subsequent AQ process, where applicable
