

This is in response to Action 0103: To investigate and provide an update on how flows are prioritised, including prioritisation selection criteria

- 1 The diagram is an illustration of the sequence of batch processing (there is no concept of prioritising one file over another, there is a sequence files are processed in).
- 2 This diagram does not show the dependencies between batch processes
- 3 Start time is referenced as 6am. This is a notional start only. Batch schedule is spread across a 24 hour window
- 4 Retrospective updates batch jobs are not included
- 5 Diagram shows the main processes only. Processes such as Supply Point updates (Market Sector Code, Supplier etc) have not been shown for ease of view purposes only.
- 6 This is for illustration purposes only
