EH/713/DA - Class 1 Modification - Gemini Bid Information Reason Text Description
Communication 4 of 5

Dear Colleagues,

In circumstances where there is insufficient quantity available against an auction, bid allocation may be prorated based on the auction parameters. In such circumstances the current reason text provided in the "Reason" field of the Bid Information Report Screen is displayed as "Scaled due to volume constraint". This reason text has been misinterpreted by users as being due to a system constraint action. As a result National Grid have requested a change to be made to this description to "Partially Allocated due to insufficient capacity". This change is applicable to the following auction types;

MSEC

RMSEC

DADSEC

WDDSEC

DISEC

DBSEC

Please note that in the Bid Information Normal Pricing API, the full reason description is not provided. This reason is given the reason code "P0" within the "RSN_FOR_RJCTN" field. This field entry will not be changing.

This change is expected to be deployed on March 18th 2007, but should you wish to comment please reply by the end of the day on the 23rd February 2007.
