Subject: EH/901/DA Revision to Error Message Reason Text Associated with AQ Backstop

Dear Colleague,

xoserve have identified that there are four Appeal/Amendment rejection codes (STD00149, STD00150, STD00151 and STD00152) that are still using the previous backstop date of 01/03/1996. The backstop date was amended to 30/09/2002 by Network Code Modification 0739 in 2005. We intend to amend the validation that generates the above rejection codes to reflect the correct backstop date.

The rejection text in the SPA Standard List will be amended to reflect this revised date. For example, the rejection STD00149 text shall be updated to 'The Start Reading Date must be after ~~1.3.1996~~ 30/09/2002'.

It is expected that this change will have no impact to Shipper operations or systems, and will ensure compliance with the Uniform Network Code. As a consequence xoserve propose that this change is treated as a Class 1 UKLink Modification. Shipper representations are requested on this matter by Friday 29th May, particularly considering the UKLink Modification Classification. If no contrary representations are received, this will be implemented immediately and rejections received after 1st June will reflect the correct validation.

Regards

David Addison
