

Replication and enhancement of Gemini API Functionality – Implementation Plan Update

Having considered the B.P. inspired request for an additional Gemini Entry Capacity A.P.I., we conclude that this is a class 3 Modification, which ordinarily would be funded by UK-Link Users.

However, Transco NTS have commissioned xoserve to analyse and develop a *Gemini Maintenance Release* that is targeted at mid-2006. Such significant subsidy can be gained by combining this request within the release that Transco NTS have, in this instance, agreed to fund the change. This agreement is conditional upon:

1. All UK-Link Users agreeing the change should be progressed and;
2. UK-Link Users accepting an indicative implementation date of mid-2006.

Should Users not agree with the above conditions, instruction may be given to progress as a standard Class 3 User-funded modification.

Unless representation to the contrary is received prior to, or at, the August UK-Link Committee, we shall assume that the above conditions are met and shall progress this change accordingly.

Should you wish to provide comments prior to the UK-Link Committee meeting, please contact David Addison (david.addison@xoserve.com).
