E.ON UK	Simon Cooper	11/02/2011	N/A	Y	We find the API very useful for Prompt data extraction on the Entry Cap side; therefore we are interested in using a similar facility for Exit Capacity.	Thank you for your prompt response. As this is the only response received, we have extended the request to the Transmission Workstream and Gas Operational Forum. Once interest has been gauged at these meetings, we will advise as to our plans.
