NR/452/DA: Provision of Value

Ref: NR/452/DA

Date: 18th August 2004

Dear Colleague,

Provision of Value where an Incoming Supplier cannot be Identified

In communication NR\445\DA you were advised that a change was being implemented to provide the value "WITHDRAWN" within the K13 "MPO_Cease_Own_Dets" where an incoming supplier was not present for a meter point that was included in a notification of ceased responsibility for a supply point following transfer of ownership.

Such an occurrence takes place when the incumbent shipper voluntarily withdraws from a supply point containing a meter point at dead or extinct status. An incoming shipper then confirms a new supply point configuration containing only the live meter points, leaving the dead/extinct meter point without an incoming confirmation, and consequently the inability to provide the identity of the incoming supplier.

In the above communication it was indicated that the implementation would be prior to 19th August 2004. This change has now been implemented.

Thank you for your responses and input which has enabled us to progress this change as soon as possible to the benefit of all participants.

Regards
