NR/499/DW - Revised API and bulk upload/download documentation for the Gemini

9th September 2005

Dear Colleague,

Please find attached revised API and bulk upload/download documentation for the Gemini Energy Balancing and Exit Capacity release, due to implement in October.

The revisions correct documentary errors that were reported during the Gemini API and main shipper trials. Reference the following two postings in the Gemini trials web forum.

http://s120592263.websitehome.co.uk/index.php?a=topic&t=13

<http://s120592263.websitehome.co.uk/index.php?a=topic&t=13>

http://s120592263.websitehome.co.uk/index.php?a=topic&t=17

<http://s120592263.websitehome.co.uk/index.php?a=topic&t=17>

Changes are tracked in all documents other than the revised API Usage Guidelines document. A Word technical problem is preventing the tracking of changes in this document. Furthermore the changes are more extensive than in the other documents, making the tracking of changes less useful. The changes are described in the Version History section of all the documents.

These documentary revisions correct inaccuracies in documentation. They do not reflect any change to the functioning of the associated APIs and bulk uploads/downloads. We are seeking approval of these revised versions at the October UK-Link committee meeting.
