NR/601/RG - API Specification Update

Dear Colleague,

During Gemini production support a query was raised by one Shipper with regards to a textual description given against one element. The element in question is for the Opening Linepack for a day and is included in the following API specifications.

System Status Information

System Status Information - History

During analysis of the query, it was determined that the current description, which refers to "Gas Day" could lead to some confusion for new users as to the expected results for that element. As a result, the description for this element is being amended to ensure that the user understands that it refers to the start of each "Calendar Day".

Please note, there is no change in the File Format.

It is issued to Users for comments as this is considered to be an administrative change to the supporting information only. Comments are specifically invited on this matter along with any other element of this communication. Comments should be received by 24th February 2006.

Please note that this is a copy of communication NR/597/RG.

Richard Griffiths
