NR/608/DA Change Request Number 13730 Post Closeout Amendments functionality for Gemini

Dear Colleague,

Delivery of the Post Closeout Amendments functionality within the Gemini system will allow authorized users to view the post closeout data via the online screens. Users will have access to the following Gemini screens:

- Post Closeout Shipper Input Claims
- Post Closeout Storage Output Claims
- Post Closeout Unique Site Claims
- View Post Closeout Measurements
- View Post Closeout Allocations
- View Site and LMN Energy
- Amend the Unmetered CSEP Energy

In addition to this, authorized users are able to request data via request files sent to the Gemini inbox via the IX Network. The Gemini system will process the request and issue back a response file to the user via the same interface.

Please find attached below the request and response files with their corresponding hierarchy diagrams. Attached is the CVP file and hierarchy diagram, which has also been amended as part of this implementation

In addition to the file formats, please find attached a presentation providing additional information details of purpose for modification

<<Gemini Screens_Post Closeout Functionality .pdf>>

These changes are scheduled for implementation as part of the 3rd November 2006 Release.

Representation comments are invited on the contents of this communication by 24th March 2006.
