NR/624/DA - S15 File Format update

Dear Colleague,

It has been highlighted that the Transfer of Ownership record (S15) generated as part of the TRF or BTF files, contains incorrect text in the description of the REQUESTED_DM_SHQ record within the file format document.

For example, the description currently reads: "The maximum hourly rate of gas flow (measured in therms) deemed by the system user for the Supply Point. CONTEXT: The maximum hourly rate of gas flow for the DM portion of the Supply Point deemed by the Customer."

Reference to 'therms' in this context is incorrect and should be 'kWh', to be consistent with other fields in the S15 record.

Also, whilst undertaking this change, reference to Transco within the file format has also been corrected.

We propose to undertake this change as a Class 1 UKLink Modification as there are no changes to the file formats. Users comments are invited on this matter by 28th April 2006. Once we have ratification from Users, notification will be sent when the revised file format is updated on xoserve's Extranet
