1 Summary

What

Latest BEIS statistics indicate that there are over 2 million gas meters with smart functionality currently installed. The Allocation of Unidentified Gas Expert (AUGE) indicated earlier this year that only 700,000 sites have been registered with Xoserve as having smart meters. Similarly there are less than 1,000 sites registered with Automated Meter Reading (AMR) devices.

Why

There is a severe under-recording of the presence of Smart Meters or AMR devices at sites. This restricts the AUGE in undertaking a robust assessment of the sources of Unidentified Gas (UG) and also impedes shippers when attempting to understand what meter type is currently installed at the site. It will also make verification of compliance with the CMA requirement for every site with Smart or AMR meters to submit reads monthly, very difficult to verify.

How

Shippers are obliged to record whether an AMR or Smart Meter is at the site. Xoserve will be required to report within 3 months of the modification being implemented the number of sites in each End User Category (EUC) Band that has either an AMR or Smart Meter installed.

2 Governance

Justification for Self-Governance

This modification is not material as it simply places an obligation on shippers to update Xoserve with information they already have.

This modification is not suitable for pre-modification discussion as the information will need to be collated in time for use by the AUGE in determining the AUGE statement for gas year 2018/2019.

Requested Next Steps

This modification should:

- be considered a non-material change and subject to self-governance
- be assessed by a Workgroup

3 Why Change?

At present there is no formal obligation on shippers to indicate to notify to the CDSP whether a site has a Smart or AMR device fitted. Such information is crucial for a number of reasons:

- Shipper compliance verification for CMA remedies regarding meter readings. Facilitation of more accurate assessment by the AUGÉ on whether meter types affect UIG.
- Facilitation of easier identification by shippers as to whether a site has Smart or AMR equipment installed.

This limits a number of industry processes, such as assessment of compliance with industry requirements and constrains activities in the market.

4 Code Specific Matters

Reference Documents

The Energy Market Investigation (Gas Settlement) Order 2016

Knowledge/Skills

None

5 Solution

Modification of the UNC is required to:

1. Amend the defined terms contained within TPD M1.2.2 as follows:
 - Introduce a new definition; Smart Metering System as contained within Supply Licence Standard Condition 1.
 - Reflect that the relevant Smart Metering System may be designated as SMETS1 or SMETS2 as defined within the Smart Metering Equipment Technical Specifications version 2.
 - To introduce a new definition; Advanced Meter as contained within Supply Licence Standard Condition 12.22.
 - Reflect that an Advanced Meter may be installed at a domestic or non-domestic premises in accordance with the relevant Supply Licence Standard Conditions.
2. Amend the existing provisions in TPD M2.1.13 and M2.1.14 to require Shipper Users to notify the CDSP of relevant Meter Information including where relevant identification of whether the Supply Meter is SMETS1 or SMETS2 pertaining to a Smart Metering System, Advanced Meter or Advanced Meter present at a 'domestic' Supply Meter Point (as defined in 1.) upon the Registered User becoming aware of the existence of such at the relevant Supply Meter Point.
3. Introduce a new report which identifies the number of Smart Meters, Advanced Meters or Advanced Meters present at a 'domestic' premise, existing at relevant Supply Meter Points.

National Grid 24/11/2017 12:50

Comment [1]: Is it only the Smart Metering System that can be SMETS (i.e. it doesn't apply to an Advanced Meter)?

National Grid 24/11/2017 12:52

Comment [2]: The Supply Licence does not separately define an Advanced Domestic Meter. Specific requirements are contained in 12.xx

National Grid 24/11/2017 12:49

Comment [3]: Need to clarify precisely what Meter Information is required and what needs to be added to the UK-Link Manual and or Annex M-1

National Grid 24/11/2017 10:58

Comment [4]: I definitely think this should refer to "physically connected to a system" or similar – see TPD G3.7

National Grid 24/11/2017 12:51

Comment [5]: Need to define the specific content and format of report, etc...

6 Impacts & Other Considerations

Does this modification impact a Significant Code Review (SCR) or other significant industry change projects, if so, how?

There is no impact on any other industry change or the SCR.

Consumer Impacts

No direct consumer impacts identified.

Cross Code Impacts

It is unknown at this stage if any impacts on other Codes such as iGT UNC.

EU Code Impacts

There is no impact on any EU energy code.

Central Systems Impacts

No Central System impacts identified. However, at present Xoserve can report in a limited fashion on the number of Smart or AMR meters installed at a site. Xoserve may wish to consider whether to amend how this information is collated and recorded.

7 Relevant Objectives

Impact of the modification on the Relevant Objectives:

Relevant Objective	Identified impact
a) Efficient and economic operation of the pipe-line system.	None
b) Coordinated, efficient and economic operation of (i) the combined pipe-line system, and/ or (ii) the pipe-line system of one or more other relevant gas transporters.	None
c) Efficient discharge of the licensee's obligations.	None
d) Securing of effective competition: (i) between relevant shippers; (ii) between relevant suppliers; and/or (iii) between DN operators (who have entered into transportation arrangements with other relevant gas transporters) and relevant shippers.	None
e) Provision of reasonable economic incentives for relevant suppliers to secure that the domestic customer supply security standards... are satisfied as respects the availability of gas to their domestic customers.	None
f) Promotion of efficiency in the implementation and administration of the	Positive

Code.	
g) Compliance with the Regulation and any relevant legally binding decisions of the European Commission and/or the Agency for the Co-operation of Energy Regulators.	None

Reliable reporting of the presence of a Smart or AMR meters at a site will improve a number of Code processes, such as compliance with CMA remedies (which is expected to be formally implemented into the UNC), AUG activities and maintenance of industry data. Therefore, this modification furthers Relevant Object f) Promotion of efficiency in the implementation and administration of the Code.

8 Implementation

No formal implementation timescales are proposed, but the proposer would wish to see the Modification implemented by 01 February 2018.

9 Legal Text

No text has been provided.

10 Recommendations

Proposer's Recommendation to Panel

Panel is asked to:

- Agree that self-governance procedures should apply
- Refer this proposal to a Workgroup for assessment.
