

UNC 0649:

Mod Title: Update to Uniform Network Code to formalise the Data Enquiry Service Permissions Matrix

Proposer: Gazprom Energy

Panel Date: 15th March 2018

Why change?

- Currently the data that can be accessed within the Data Enquiry Service (DES) by User and User access type, is detailed within the DES Permissions Matrix which forms part of the UK Link Manual.
- This Modification seeks to formalise the DES Permissions Matrix within the Uniform Network Code (UNC), to permit the release of data in line with the matrix. It also looks to define the process to amend the data fields and/or permissions within the matrix going forward.
- To confirm, any amendments to the data fields (adding or removing fields) and/or amendments to permissions will be classed as a material change and would require a separate modification.
- The formalisation of the DES Permissions Matrix will make the process to amend the data fields and/or permissions within the DES Permissions Matrix clear.

Solution

- This Modification seeks to formalise the DES Permissions Matrix within the UNC.
- TPD Section V 5.5 (Exceptions) of the UNC is amended to formalise the DES Permissions Matrix which would permit the CDSP to release data in line with the matrix.

Recommended Steps

- The Proposer recommends that this modification should be:
 - Subject to self-governance
- As self-governance procedures are proposed, implementation could be sixteen business days after a Modification Panel decision to implement, subject to no Appeal being raised.
- This was initially considered by Workgroup as a Pre-Modification agenda item on 25th January 2018.
