Market Breaker Tolerance - Acceptance of Failed Readings after AQ Correction

Acceptance of Readings

- Change raised within the Programme (CR UKLP 202 refers).
- “Reads failing market breaker tolerance to be accepted for correct date following AQ Correction.”
 - Assume that AQ Requirement is to apply the AQ post correction to the reading for validation purposes for the original reading date
 - Assume that this requirement is specific to this scenario – otherwise BRD states AQ applied is as per reading date (Settlement v5.0 – 5.15.7) noting weighted AQ is currently utilised
- AQ Correction receipt deadline is M-15

Acceptance of Readings - Scope

- Class 4 Readings
 - In scope
- Class 1 and 2 Readings
 - Closeout currently at D+5 – assume that this remains unchanged?
- Class 3 Readings
 - Closeout of readings at M+10 – assume that this remains unchanged?

Acceptance of Readings

- Any reading types / reasons to exclude?
- Assume that this is an exception to provision with a UNC – Class 4 as defined in M 5.9.2
 - (a) in the case of a Monthly Read Meter, not less than 7 Days;
 - (b) in the case of an Annual Read Meter at a Larger Supply Meter Point, not less than 14 Days,
 - (c) in the case of an Annual Read Meter at a Smaller Supply Meter Point, not less than 25 Days
 - (d) after the Read Date of the preceding Valid Meter Read;
- Assume that a deadline for receipt of reading is required – e.g. [30] [Business Days] after AQ Correction effective date?

Acceptance of Reading Types

- Any reading submitted after a reading is fulfilled – e.g. Opening Replacement Reading – will be a replacement reading
- RGMA Readings – whilst no explicit time provision validation applied, these readings would be subject to this change to ensure that Corrected AQ is utilised – provided other validations are passed

Next Steps

- Review of responses today
- Incorporate into a requirement statement
- Additional feedback to be requested via JO in advance of August Distribution WG
