Apart from the statistical information provided there had been a number of other discussions in the unregistered working group that looked at the rationale in moving the investigation of unregistered meter points to those that remained unconfirmed and had been created over 12 months previously.

1. It was thought that the size of the dataset being issued to shippers would allow and increase a better response rate.
2. Utility infrastructure Providers had confirmed with us that many of the requests for services were many months in advance of the services being laid.
3. It was agreed that xoserve, as part of the industry statistical information supplied, would include all Unregistered sites < 12 months old to ensure that these remained at a consistent level.
