Date of Representation:	3 November 2017
Support or oppose implementation?	Support
Relevant Objective:	d) Positive

Reason for support/opposition: Please summarise (in one paragraph) the key reason(s)

A number of UNC modifications have been raised to address UIG volatility, of which this change is one. It aims to reduce the variability to UIG caused by the use of estimated consumptions for daily metered (DM) sites. This modification achieves that aim and so will be of benefit to the industry.

Implementation: *What lead-time do you wish to see prior to implementation and why?*

We agree with the proposer's timetable

Impacts and Costs: *What analysis, development and ongoing costs would you face?*

There will be a marginal operating requirement to handle the notifications from Xoserve as they arise, but we are confident that we can meet this obligation without a significant increase in cost.

Legal Text: *Are you satisfied that the legal text will deliver the intent of the Solution?*

We have not reviewed the legal text.

Are there any errors or omissions in this Modification that you think should be taken into account? *Include details of any impacts/costs to your organisation that are directly related to this.*

None.

Please provide below any additional analysis or information to support your representation
