EXECUTIVE SUMMARY

Owing to a mis-measurement of orifice diameters flows have been mis-measured at affected offtakes connected to the National Transmission System. This project has been undertaken to resolve these errors.

At Caldecott a correction factor of 1.002310 should be applied during the period of mis-measurement.

Over the period 27/06/2007 to 24/04/2008 inclusive the flow was 115.41910 mscm and the corrected flow should be 115.68487 mscm.

1 INTRODUCTION

Owing to a mis-measurement of orifice diameters flows have been mis-measured at affected offtakes connected to the National Transmission System. This project has been undertaken to resolve these errors. This report covers the flows through Caldecott in the period of the error. The Joint Office Error Code is EM003.

2 ORIFICE DIAMETERS

The calibrations of the orifice plates in question gave the measured diameters shown in Table 1. The diameters at 20 °C have been calculated.

TABLE 1

Figure 1 shows the data from Table 1 for the orifice bores at 20°C. This figure shows that there is a low measurement of diameter followed by a high measurement of diameter. The deduction from this graph is that a plate was mis-measured.

The calibration certificates for the orifice plates are given as Appendix A.

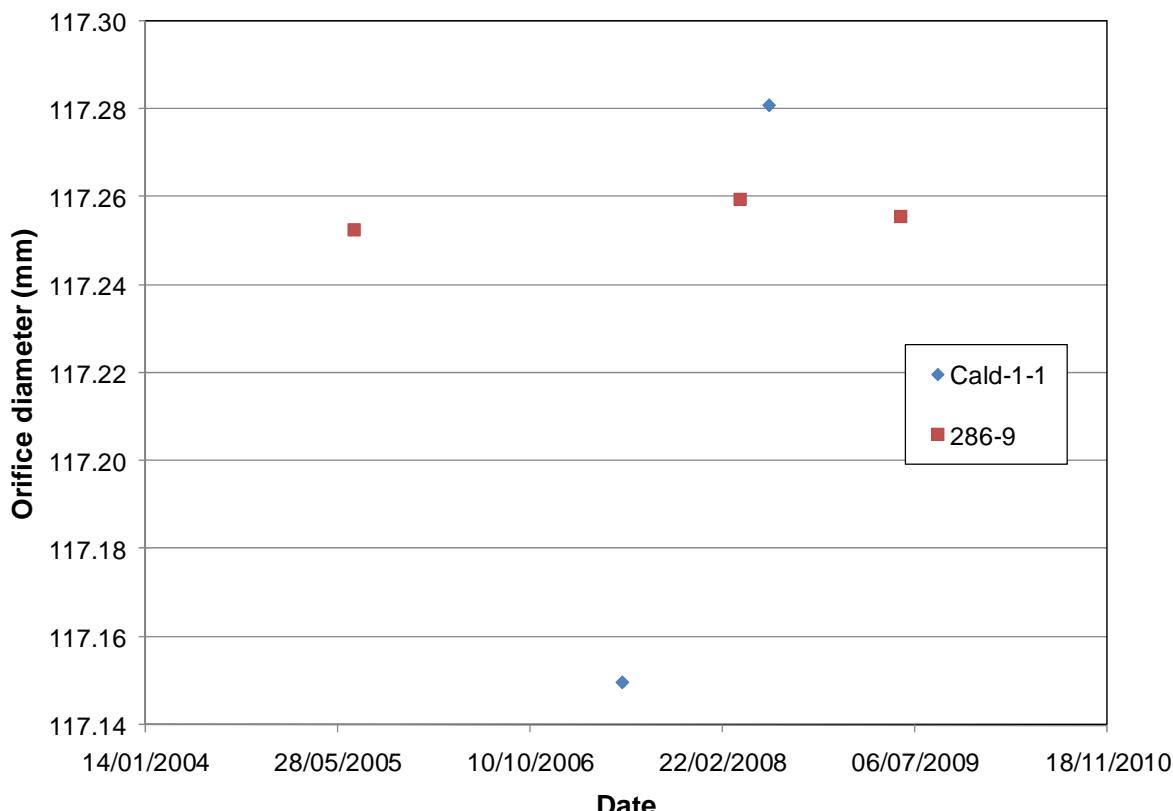

Figure 1 Orifice Diameters at 20 °C

The plates actually used in the meter tube are given in Table 2.

3 CORRECTING THE FLOWRATE

To correct the measured flowrate by replacing an incorrect diameter with the correct diameter might appear to be fairly straightforward. However, the data supplied only give time to the nearest minute and at four-minute intervals. This is inadequate for very accurate calculation. It is possible to calculate the flow over each time interval and to add the values over a day; this method can be used to check that the calculations are being done correctly, but the differences between the summed figures and the ones already given in the spreadsheet are too large to enable the correction to be calculated in this way. An alternative method has therefore been used.

The mass flowrate q_m is given by

$$q_m = \frac{\pi d^2 C \varepsilon \sqrt{2\rho\Delta p}}{4\sqrt{1-\beta^4}}$$

where d is the orifice diameter, C is the discharge coefficient, ε is the expansibility, ρ is the density, Δp is the differential pressure, and β is the diameter ratio.

If the corrected and original data are described with subscripts c and o , then the following correction factor is obtained:

$$\frac{q_{m,c}}{q_{m,o}} = \left(\frac{d_c}{d_o} \right)^2 \frac{C_c \varepsilon_c}{C_o \varepsilon_o} \sqrt{\frac{1-\beta_o^4}{1-\beta_c^4}}$$

The correct effective diameter is taken as the average of the measurements shown in Table 1 for that plate excluding the erroneous measurement. It is then necessary to calculate C and ε in each case, and they were determined from the equations in ISO 5167-1:1991. C is

a function of β and Re_D ; so there is a change in C due to β , but the change varies with Reynolds number. Throughout the calculations the upstream pressure p_1 is taken as 47 bar a; the change in $q_{m,c}/q_{m,o}$ due to changing the static pressure by 10 bar is around 0.00001% at maximum.

Over the period from 27/06/2007 to 17/04/2008 the correction can be calculated as in Table 3; throughout this calculation the meter tube diameter is 304.872 mm, the isentropic exponent is 1.3556 and the dynamic viscosity 0.0000122 Pa s.

TABLE 3
THE CORRECTION FROM 27/06/2007 TO 17/04/2008

So $q_{m,c}/q_{m,o}$ is 1.002310.

Over the period from 17/04/2008 to 22/04/2008 the correction can be calculated as in Table 4; throughout this calculation the meter tube diameter is 304.872 mm, the isentropic exponent is 1.3563 and the dynamic viscosity 0.0000122 Pa s.

So $q_{m,c}/q_{m,o}$ is 1.002310.

Over the period from 22/04/2008 to 24/04/2008 the correction can be calculated as in Table 5; throughout this calculation the meter tube diameter is 304.872 mm, the isentropic exponent is 1.3563 and the dynamic viscosity 0.0000124 Pa s.

So $q_{m,c}/q_{m,o}$ is 1.002310.

4 CORRECTIONS ON A DAILY BASIS

The volume flows for each day from 27/06/2007 to 24/04/2008 are given in Table B.1 of Appendix B together with the corrected values. It has been assumed that the plates were changed at 09:30; therefore the whole flow for 27/06/2007 has to be corrected and 15.0% of the flow 24/04/2008 should be corrected based on the total flow measured before 09:30 (the differential pressure appears to be in error). Summing the data gives the figures in Table 6.

5 CONCLUSIONS

A correction factor of 1.002310 should be applied during the period of mis-measurement.
