Notification of Revised Shrinkage Proposals 2014/15

SGN has undertaken a review of the forecasted shrinkage volumes for 2014/15 and this has resulted in a forecasted reduction in shrinkage volume for South, South East and Scotland local distribution zones.

The original Initial and Final Shrinkage Proposals for 2014/15 were calculated prior to the assessment of the 2013/14 volumes.

After looking at all the factors including the impact of the 2013/14 actual shrinkage volumes, SGN has revised its proposals to endeavour to provide a more accurate forecast and minimise year end reconciliations. We propose to apply the revised Shrinkage Daily Quantities outlined in Table 2 of the document from 06:00 hrs on 1st October 2014.

Please note that these revised shrinkage volumes now also include a forecasted 13.1 GWh reduction associated with the proposed LP service modification to the Leakage Reduction Monitoring Model. The inclusion of this reduction is based on an indication from industry that the use of the LP service modification will be approved for use in 2014/15.

If you require further clarification, please email me on joanne.parker@sgn.co.uk.

Yours faithfully

Joanne Parker
