<http://www.energycentral.com/generationstorage/fossilandbiomass/articles/964/Further-UK-Gas-Deregulation-Review-of-Gas-Metering-Arrangements-RGMA-A-Retrospective-View>

Basically it says:

- Ofgem sponsored the RGMA programme
- There was a cross industry MoU agreed to manage the programme
- The Industry Metering Separation Implementation Forum (IMSIF) Project Team was elected to make “day to day project decisions”
- An Independent Project Assurance team was established through “a large systems integrator to collect each organisations project status and audit their readiness for cutover
- After testing the IMSIF took a formal vote on the cutover date

I think the issues now are:

- The Nexus Programme is already underway and we are trying to overlay governance, not start and develop workgroups, which IMSIF did
- Who sponsors the Project? I am not sure that Ofgem has the appetite for this??
- Can an MoU be issued to Shippers and Transporters at this stage? And what should it contain?
- Do we have the ability to look at cutover and scrutinise testing. [dependant on the MoU and parties willingness to engage]
- Can we embed assurance in the model?
