

0602: Implementation of Non Effective Days and Variant Non-Business Days for Project Nexus Implementation (Project Nexus transitional modification)

Andy Clasper

National Grid Distribution

Why change?

- To enable a smooth and efficient transition from the legacy systems to the new UK-Link systems at PNID a period of 'system downtime' in which the UK-Link System will not be available for transactions and processes is required
 - Modification 0532 which was previously raised to provide 7 non effective days prior to PNID was made defunct following the deferral of PNID from 1st Oct 2016 to 1st June 2017
 - PNID was previously planned for **Saturday** 1st Oct 2016 which ensured the weekend could be utilized to bring the system safely back online
- PNID is now planned for **Thursday** 1st June 2017, as a consequence the 1st and 2nd June are now required to be variant non-Business Days
- In addition the minimum confirmation timescales require extending in order to ensure a minimum of one day Supply Point Objection window

Solution

- 7 non-effective days (NEDs) prior to PNID
 - UK-Link System will be taken offline
- 2 variant non-Business Days (VNBDs) post PNID
 - UK-Link Systems will be subject to additional support measures during this 2 day period
- Extension to minimum confirmation timescales where the required Supply Point Registration Date is 9th to 14th June 2017

- Provision of Code Communications
- Can updates to the UK-Link System be undertaken?
 - Can Confirmations become effective?
 - DM Readings
- Liabilities
- Do days count as Business Days?

NEDs

25th – 31st May 2017

VNBDs

1st and 2nd June 2017

Recommended Steps

- The Proposer recommends that this modification should be:
 - Subject to self-governance
 - Proceed to Workgroup for assessment (aspiration to complete Workgroup Report within a single workgroup)
