

OAW action 0304 – update for May 2022 meeting provided by Matthew Newman

Following on from the OAD workgroup. I can confirm that we have all of the outstanding NTS offtake MERs on our books. We will be working on these as a priority once all of the information is readily available and if there are any points of clarification needed / additional data required we will contact the specific DN directly.

To build on the discussion point of the outstanding MERs we had during the call, the MERs listed below are the ones that we are involved in (NTS connects), I believe the others are Bio Methane sites and are embedded within the LDZs. As a result, we are not involved in the review or authorisation process. Please see below for a progress update on each of the outstanding MERs:

EM009 – Error notified but no report available yet

NO014 – This is being worked on and will hopefully be signed off soon

NO017 – This is being worked on

WM020 – Zoe has discussed this with Cadent. Final checks need to be carried out but hopefully this will be signed off soon

WM023 – MER in compilation

Comment by Helen Cuin – Joint Office

Following Matthew's email (attached) I have checked the current Measurement Error Register and confirm no updates are required to the register. All errors present remain live which helps re-assure the Workgroup that the communication process has kept these errors up to date.
