**Abstract**

Introduction of a Gas Balancing Alert

The CIA supports the implementation of a Gas Balancing Alert (GBA) and was present throughout the discussions of this proposal both at the Demand Side Working Group and Gas Transmission Workstream.

At the moment we are not in support of a within day GBA option as we believe that any issues can be signalled through the Active Notification System (ANS) which will appear on NGG's website.

CIA agrees that the GBA would act as a signal to Users and major gas consumers that there is a higher likelihood of demand response being required. However, we would prefer a signal with more notice if possible. We would also like to see an appropriate reporting mechanism after every GBA through the Gas Operational Forum.
