Modification Proposal 111**Decision****Reporting of Information Relating to CSEPs****Present Position**

Currently, Transco is required to "typically" include estimates of the observed maximum and expected peak demands for pipeline networks connected to Transco's system (CSEPs). These networks are not metered so it is not possible to collect accurate data. The operators of these networks may also feel that predictions of future flows would be commercially sensitive and as such they may be reluctant to provide them to Transco.

Proposal

It is proposed that Transco should no longer publish this information, though Transco would continue to collect it for its own planning purposes.

Decision

Since there is general support for this proposal and in the absence of any specific Ofgas concerns on this issue, we have accepted this proposal.

Possible impact on customers

We do not anticipate any direct impact on customers of any size from this proposal.
