

Summary of Key Messages from DESC TWG on 27th April 2022

Agenda Item Outcomes

Agenda Item 2.0: Collection of Daily Gas Consumption Data for EUC Modelling

- DESC TWG reviewed the process for collecting and validating the sample data* for this year's analysis period and agreed the EUC demand modelling runs to be performed in support of new gas demand profiles for Gas Year 2022/23. This review also included agreeing the Winter Annual Ratio (WAR) thresholds for EUCs in Bands 3 to 8 (293 to 58,600 MWh pa) for next winter.

Results available [here](#)

**Last year due to the impacts of the National COVID-19 lockdowns the analysis data collected in the modelling process for I&C EUCs was not used. This year as the analysis period is from March 2021 to March 2022, all of the data is expected to be used.*

Agenda Item 3.0: EUC Modelling Output – Impacts of Holiday Code Rule Changes

- DESC TWG reviewed the updates required to the suite of EUC demand modelling support files as a result of changing the rules for assessing holiday periods.

Details of these file changes necessary are available [here](#)
