Gas DSR Update

On 14th October 2022, Ofgem approved UNC0822 and the associated amendments to the Gas DSR Methodology, which:

- Enable National Grid NTS to accept DSR Market Offers on the OCM post issue of a Margins Notice as well as a Gas Balancing Notification
- Oblige National Grid NTS to run an annual invitation process for shippers to commit to post DSR Market Offers, on behalf of large consumers, for within-day or day-ahead demand reduction for the coming Winter and the next two Winters

National Grid NTS shall publish documents to launch the first such invitation in mid-November 2022 via ENA for DSR options for the remainder of Winter 2022/23 and Winter Periods 2023/24 and 2024/25

The invitation window shall be open for 15 business days and following the assessment period, any accepted DSR options for 2022/23 shall be in force from late Dec / early January

We note Ofgem's request in the 0822 decision letter for continued DSR development which enables broader consumer access and we are currently considering how to progress this
