Action: **RG140/08**

Response provided by: Chris Logue, National Grid NTS

Date: 26 June 2007

Abstract

"Dear Colleague

In response to the question (detailed in the RG 140 minutes) about the type of API that has been specified for the new internet platform (MIPI07), I can confirm that the system will utilise a "pull" type API rather that a "push" type. Developing a push API would require a pre-defined set of requirements from pre-defined set of users (Needs to work on subscription based publication logic) that is not the case with MIPI07 system.

Best regards

Chris"
