

Modification 0152 “Limitation on Retrospective Invoicing and Invoice Correction”

The Proposer, British Gas Trading, requests a variation to this Proposal, pursuant to UNC Modification Rules Section 6.5.1(c) of the UNC.

Reason for Variation

Following discussions at and following the June Modification Panel, BGT believes that it is necessary to add further clarity to this modification proposal, in particular how the “5 year model” will actually work in practice. A further change has been made to emphasise that Energy Balancing invoices will be caught by this proposal.

Following the decision by Modification Panel that legal text was required, thereby building in a month’s delay, BGT has also updated the timeline for the proposal.

BGT believes that the best way forward is to make a variation to the Proposal, by further explaining the “5 year model” in more detail at various points throughout the proposal, and also by adding as appendix 1 the business rules as drafted by Review group 0126.

Nature of Variation

BGT has not sought to change the original intention or purpose of this proposal, simply to clarify the meaning behind the term “5 year model” and to emphasise that energy balancing invoices will be caught by this proposal.

This clarity has been added through additional wording at various points in the proposal, and by appending the business rules, as drafted by Review group 0140, to the end of the proposal for further clarity.

The timeline has also been updated.
