

Mark,

With regard to action reference D9037 'The DNs and the NTS to establish with xoserve the feasibility of bringing forward the demand forecasting activities,' I can confirm the following.

National Grid Transmission distribute demand forecasting information in May each year. The DN's that contracted with xoserve this year received demand forecast information by 13th April 2006. Any DN's that wish to take up this service in the coming year should also expect to receive this information by mid April 2007.

Regards
