Communication Ref : CB/967/JS
Subject : COR1814 - Removed MAM ID

Colleague,

Removed Blank MAM ID Issue

Following the additional action taken by xoserve at the April UK Link Committee meeting regarding the presence of MAM ID data held on xoserve's system; please see the following excerpt from the xoserve GT General Explanatory document which refers to the deletion of the MAM ID at confirmation:

6.2.2. MAM ID and change of supplier process*

At the change of supplier the existing MAM ID is deleted. It is the responsibility of the incoming shipper to submit a K08 record to provide the MAM ID for their ownership. Note: where the supply point is undergoing a re-confirmation i.e. the shipper is not changing, the MAM ID is carried through.

The MAM ID must be provided by Shippers when they confirm a site, although in the case of a reconfirmation (by the same Shipper); the current value should carry forward other than where there has been a period whilst the meter point has been shipperless. It was believed that the UK Link system was not carrying the value forward correctly and after investigation, xoserve can conclude that UK Link is correctly carrying the MAM ID value forward.

xoserve are planning to discuss the general maintenance of MAM ID's at the next Operational Forum on 11 May 2010. If, after these discussions a new requirement emerges we will be happy to investigate if any further changes are required.

Should you have any further questions, please do not hesitate to respond to .Box.UKLINK.Manual.
