

Provision of interim report prior to implementation of UNC Modification 0518S

Distribution Workgroup – November 2015

Background

UNC Modification 0518S seeks to provide a report to enable Shipper Users to then check data in order to reduce unnecessary GSR visits.

The implementation date for UNC 0518S is Project Nexus implementation date.

The Interim report will enable the majority of the benefits of UNC 0518S to be achieved earlier than Nexus Implementation.

Interim Report

Expectations for the interim report...

- Sent monthly and captures Supply Meter Points that were disconnected 6 months previously, and no attached meter has been recorded since. The report is only sent to the Shipper User who was incumbent at the time of Supply point Isolation.
- Shipper Users update address details on the Supply Point Register (SPR) where details are found not to be accurate on the report.

The Interim Report is not expected to...

- Indicate attempts to update the SPR with Meter Information or Meter readings

Report differences – Interim vs Enduring

The items that will not appear on the interim report will be:

- ‘METER_REMOVED_SOURCE_INDICATOR’ – This data item is not included on the interim solution. The item indicates which system the removal was sourced from (UK Link or C&D Store)
- ‘POTENTIAL_METER_INSTALLED_INDICATOR’ – This data item indicates where there have been attempts to load reads or attach assets and is not included
