

## Comments on Draft Legal text for Modification 0331 provided by National Grid NTS

In summary Section 8 of the Proposal refers to 'developing an underlying methodology', however this does not appear to have fed into the draft text which in general says the subcommittee will determine rather than develop the methodology. Examples of various references are

- 1.4.3 Proposal says develop an underlying methodology for 'CWV Reviews including determination frequency' text says values will be determined
- 1.5.2 draft text says the sub committee will determine the seasonal normal value, we can not find where it says this in the mod
- 1.5.4 The mod says agree a methodology for seasonal normal reviews not that they will be determined
- 1.6.1 States "where the relevant sub-committee determines", proposal says agree a methodology
- 1.6.7 This says that the sub committee will validate the data; however we can not find where in the proposal it says the sub committee will validate the data.
- 1.7.1 The mod says agree a methodology the text say the "sub committee will develop or revise"
- 1.8.2 We believe this should be sub committee not Transporters
- 1.11.1 Panel members is a defined term relating to Modification Panel, and we are not sure what the intention of its use here is

The above are only our initial observations and we hope these prove useful as part of a detailed comparison of the draft text to the mod.
