

# **Report for Network Code Committee**

## **June 2007**

### **Demand Estimation Sub-Committee**

#### **Meetings Held**

04 June 2007 (Demand Estimation Technical Forum and Demand Estimation Sub-Committee)

#### **Planned**

23 July 2007, Solihull

#### **Matters for Network Code Committee's Attention**

None

#### **Matters discussed**

Spring analysis of algorithm performance and review of EUC definitions and demand models were presented by xoserve on behalf of the Transporters.

The ongoing analysis showed no significant differences to the previous year's analysis. Splits in bandwidths degraded model/profiling accuracy and provided no significant benefit to Indicative Load Factors.

The following recommendations for 2007/08 were made by xoserve on behalf of the Transporters:

- Retain Small NDM EUC Breakdowns at same points as in previous years
- Model EUC Band 1 (0 – 73.2 MWh pa) using a 'Domestic only' dataset
- Model Large NDM EUC Bands using similar levels of aggregation to those of previous years (same as 2006/07)

Model smoothing would be retained and reviewed at the DESC meeting in November 2007.

Publication of initial proposals by 30 June 2007.

Publication of Final Proposals by 15 August 2007.
