

ASSESSMENT OF ERROR DUE TO ORIFICE DIAMETER MIS-MEASUREMENT AT ROUDHAM HEATH

A Report for

**National Grid
Brick Kiln Street
HINCKLEY
Leicestershire
LE10 0NA**

PROJECT NO: NGR010

REPORT NO: 2010/234

DATE: 16 JUNE 2010

This report is issued as part of the contract under which the work has been carried out for the client.

NOTES

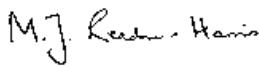

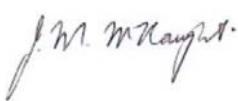

- 1 This report may be published in full by the client unless it includes information supplied in confidence by TUV NEL Ltd or any third party. Such information, if included within the report, shall be identified as confidential by TUV NEL Ltd.
- 2a The prior written consent of TUV NEL Ltd shall be obtained by the client before publication by them of any extract from, or abridgement of, this report.
- 2b The prior written consent of TUV NEL Ltd shall be obtained by the client before publication:
 - Where such publication is made in connection with any public enquiry, legal proceedings or arbitration.
 - Where such publication is made in connection with any company prospectus or similar document.
 - Where the client has notice that TUV NEL Ltd is seeking or intends to seek patent or like protection for any intellectual property produced in the course of rendering the services.

Assessment of Error Due to Orifice Diameter Mis-Measurement at Roudham Heath

A Report for

National Grid
Brick Kiln Street
HINCKLEY
Leicestershire
LE10 0NA

Prepared by:	Approved by:
	
Dr M J Reader-Harris	J M McNaught

for
Michael Valente
Managing Director

Date: 16 June 2010

EXECUTIVE SUMMARY

Owing to a mis-measurement of orifice diameters flows have been mis-measured at affected offtakes connected to the National Transmission System. This project has been undertaken to resolve these errors.

At Roudham Heath a correction factor of 1.002177 should be applied during the period of mis-measurement.

Over the period 23/07/2007 to 27/03/2008 inclusive the flow was 322.37060 mscm and the corrected flow should be 323.07000 mscm.

1 INTRODUCTION

Owing to a mis-measurement of orifice diameters flows have been mis-measured at affected offtakes connected to the National Transmission System. This project has been undertaken to resolve these errors. This report covers the flows through Roudham Heath in the period of the error. The Joint Office Error Code is EA005.

2 ORIFICE DIAMETERS

The calibrations of the orifice plates in question gave the measured diameters shown in Table 1. The diameters at 20 °C have been calculated.

TABLE 1

ORIFICE DIAMETERS

Calibration Reference	Plate serial no	Declared certificate date	Orifice bore (mm)	Temperature	Value at 20 °C
OP4039	6098	14/04/2004	138.7730	21	138.7708
OP4241	143-5	31/12/2004	138.5190	21	138.5168
OP60025	6098	20/02/2006	138.7730	21	138.7708
OP70026	143-5	13/03/2007	138.3845	21	138.3823
OP70076	144-1	11/07/2007	138.2535	20	138.2535
OP80003	6098	19/02/2008	138.7740	20	138.7740
OP80029	144-1	19/06/2008	138.3735	20	138.3735
OP90057	6098	18/12/2009	138.7700	20.3	138.7693

Figure 1 shows the data from Table 1 for the orifice bores at 20°C. This figure shows that for plate 143-5 there is a high measurement followed by a low measurement of diameter and for plate 144-1 there is a low measurement followed by a high measurement of diameter. The deduction from this graph is that plates were mis-measured. From the experience of other sets of measurements it is the low measurements that are in error.

The calibration certificates for the orifice plates are given as Appendix A.

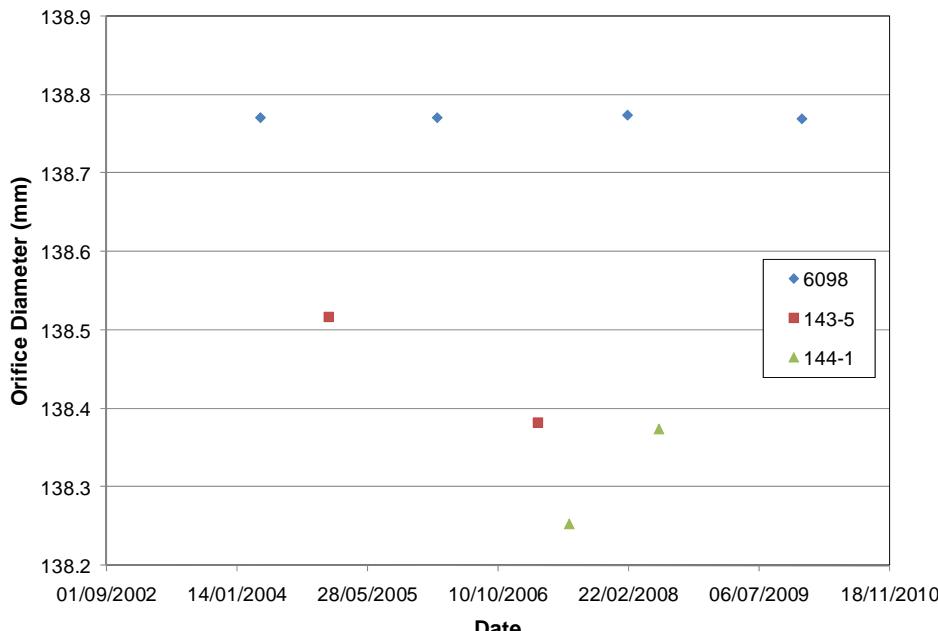

Figure 1 Orifice Diameters at 20 °C

The plates actually used in the meter tube are given in Table 2.

TABLE 2

PLATES USED IN EACH LINE AS CONFIGURED BY THE FLOW COMPUTER

Error in orifice diameter?	No	Yes	Yes	No

3 CORRECTING THE FLOWRATE

To correct the measured flowrate by replacing an incorrect diameter with the correct diameter might appear to be fairly straightforward. However, the data supplied only give time to the nearest minute and at four-minute intervals. This is inadequate for very accurate calculation. It is possible to calculate the flow over each time interval and to add the values over a day; this method can be used to check that the calculations are being done correctly, but the differences between the summed figures and the ones already given in the spreadsheet are too large to enable the correction to be calculated in this way. An alternative method has therefore been used.

The mass flowrate q_m is given by

$$q_m = \frac{\pi d^2 C \varepsilon \sqrt{2\rho\Delta p}}{4\sqrt{1-\beta^4}}$$

where d is the orifice diameter, C is the discharge coefficient, ε is the expansibility, ρ is the density, Δp is the differential pressure, and β is the diameter ratio.

If the corrected and original data are described with subscripts c and o , then the following correction factor is obtained:

$$\frac{q_{m,c}}{q_{m,o}} = \left(\frac{d_c}{d_o} \right)^2 \frac{C_c \varepsilon_c}{C_o \varepsilon_o} \sqrt{\frac{1-\beta_o^4}{1-\beta_c^4}}$$

The correct effective diameter is taken as the average of the measurements shown in Table 1 for that plate excluding the erroneous measurement. It is then necessary to calculate C and ε in each case, and they were determined from the equations in ISO 5167-1:1991. C is a function of β and Re_D ; so there is a change in C due to β , but the change varies with Reynolds number. Throughout the calculations the upstream pressure p_1 is taken as 61 bar a; the change in $q_{m,c}/q_{m,o}$ due to changing the static pressure by 10 bar is around 0.00003% at maximum.

Over the period from 23/07/2007 to 28/01/2008 the correction can be calculated as in Table 3; throughout this calculation the meter tube diameter is 202.7269 mm, the isentropic exponent is 1.3592 and the dynamic viscosity 0.000012 Pa s.

TABLE 3
THE CORRECTION FROM 23/07/2007 TO 28/01/2008

	d mm	β	ε	Re_D	C	$\frac{q_{m,c}}{q_{m,o}}$
Original: $\Delta p=10$ mbar	138.2535	0.681969	0.999941	1772916	0.603755	
Corrected $\Delta p=10$ mbar	138.3735	0.682561	0.999941	1776778	0.603731	1.0021781
Original $\Delta p=500$ mbar	138.2535	0.681969	0.997071	12488871	0.603198	
Corrected $\Delta p=500$ mbar	138.3735	0.682561	0.997069	12516048	0.603174	1.0021760

So $q_{m,c}/q_{m,o}$ is 1.002177.

Over the period from 28/01/2008 to 27/03/2008 the correction can be calculated as in Table 4; throughout this calculation the meter tube diameter is 202.7269 mm, the isentropic exponent is 1.3589 and the dynamic viscosity 0.0000121 Pa s.

TABLE 4
THE CORRECTION FROM 28/01/2008 TO 27/03/2008

	d mm	β	ε	Re_D	C	$\frac{q_{m,c}}{q_{m,o}}$
Original: $\Delta p=10$ mbar	138.2535	0.681969	0.999941	1758277	0.603759	
Corrected $\Delta p=10$ mbar	138.3735	0.682561	0.999941	1762107	0.603736	1.0021781
Original $\Delta p=500$ mbar	138.2535	0.681969	0.997071	12385671	0.603199	
Corrected $\Delta p=500$ mbar	138.3735	0.682561	0.997069	12412623	0.603175	1.0021760

So $q_{m,c}/q_{m,o}$ is 1.002177.

4 CORRECTIONS ON A DAILY BASIS

The volume flows for each day from 23/07/2007 to 27/03/2008 are given in Table B.1 of Appendix B together with the corrected values. It has been assumed that the plates were changed at 11:15 on 23/07/2007 and at 10:20 on 27/03/2008; therefore 77.9% of the flow for 23/07/2007 has to be corrected and 20.6% of the flow for 27/03/2008 has to be corrected based on the flow before and after the times at which the plates were changed. Summing the data gives the figures in Table 5.

TABLE 5

THE FLOW OVER THE PERIOD 23/07/2007 TO 27/03/2008 INCLUSIVE

Flow (mscm)	322.37060
Correction (mscm)	0.69940
Corrected flow (mscm)	323.07000
% change	0.2170

5 CONCLUSIONS

A correction factor of 1.002177 should be applied during the period of mis-measurement.
